# NEW SOUTH WALES RECORDED CRIME STATISTICS 1998

**Marilyn Chilvers** 

NSW BUREAU OF CRIME STATISTICS AND RESEARCH

#### **ACKNOWLEDGEMENTS**

The production of this report was greatly assisted by officers within the NSW Police Service. Special thanks are due to officers in the Information Technology Branch and in the Planning and Evaluation Section of the Audit and Evaluation Branch.

Several officers within the Bureau also made important contributions. In particular, Peter Doak was responsible for the programming and table production and Jonathan Nichol carried out the desktop publishing.

#### INTRODUCTION

This report presents data on crimes reported to or detected by NSW police from January 1996 to December 1998. The data were extracted from the Computerised Operational Policing System (COPS) of the NSW Police Service in January 1999.

The report includes an overview of trends over the most recent two-year period for a selection of serious offence categories. The overview in this year's report indicates that, although there are a number of offences whose recorded rate is still rising in NSW, the position as at the end of 1998 is a significant improvement on that revealed in the 1997 Recorded Crime Statistics Report.

In the 1997 report, increases were recorded in eight major categories of offence. The increases recorded in most of these categories were also substantial, particularly among the most serious forms of offending, such as assault and robbery. This year, increases have been recorded in seven categories of offence and the size of the increase amongst those categories of offence which are still rising has, in most cases, diminished significantly. The 1997 report, for example, revealed a 33 per cent increase in robbery with a firearm. This year's report shows this category of offence is now stable. Similarly, motor vehicle theft, which had increased by 13 per cent over the two-year period to the end of 1997, is now no longer rising. Smaller increases have also been recorded in the categories of assault and steal from a motor vehicle. For the first time in recent years, there has been a significant downward trend in each of the sexual offence categories.

While the general pattern in this year's report is one of improvement there are some exceptions to this rule. In general they involve non-violent property offences. Malicious damage to property, which was stable in last year's report, shows an increase of nearly 12 per cent in this year's report. Steal from a dwelling, which was stable in last year's report, shows an increase of nearly eight per cent in this year's report. Break and enter (non-dwelling) which had risen by three per cent in last year's report, has risen by seven per cent in this year's report.

#### **DEFINITIONS AND EXPLANATORY NOTES**

The data in this report are extracted from the NSW Police Service's Computerised Operational Policing System (COPS). This system is used for record-keeping for all police operations, not just for criminal matters.

Prior to April 1994, the NSW Police Service used a different system for recording criminal offences. Recorded crime statistics for NSW for periods prior to April 1994 are not comparable with those for more recent periods. In this report:

- the counting units are recorded *criminal incidents* (except for murder and manslaughter where the counting units are victims) rather than recorded *offences*; and
- the data are categorised by date of *reporting* to police (or date of detection by police) rather than date of *occurrence* of the offence.

#### RECORDED CRIMINAL INCIDENTS

A *criminal incident* is defined as an activity detected by or reported to police which:

- involved the same offender(s);
- involved the same victim(s);
- occurred at the one location;
- · occurred during one uninterrupted period of time;
- falls into one offence category;
- falls into one incident type (for example, 'actual', 'attempted', 'conspiracy').

One incident may involve two offenders assaulting the same victim. This would be recorded as one assault incident. Alternatively, suppose a man reports to police that his neighbour demanded money from him, then assaulted him when he did not comply. For such an event, two criminal incidents are recorded because two distinct offence types are involved (demand money with menaces and assault) even though the same parties were involved at the same time and in the same place.

#### **RECORDED VICTIMS**

For murder and manslaughter only, the counting units used are victims. Under the definition of a criminal incident (same parties, same time, same place, same offence and same incident type) one murder or manslaughter incident could involve two or more persons being killed. Because of the seriousness of these offences and their relatively small numbers, it was considered to be more appropriate to count the number of victims, rather than the number of criminal incidents. Hence, where *one* murder incident involves a person killing six people, *six* murder victims are counted.

#### **OFFENCE CATEGORIES**

The classification of offences in this report is based on the Australian National Classification of Offences (ANCO) issued by the Australian Bureau of Statistics (ABS, 1985, Cat. No. 1234.0).

For all *type of offence* classifications used in the report, Appendix 1 lists the offence categories included in the classification. The offence categories are those used by the NSW Police Service and do not necessarily correspond exactly with offences defined in legislation.

#### **COUNTING PERIOD**

Criminal incidents are included in the counting period in which they were reported to or detected by police.

In most cases criminal incidents are recorded on COPS on the day of reporting. Because the reporting date and recording date may differ, it is possible for some updating of data to occur. That is, data extracted for a specified period of time (incidents reported in 1997, for example), may differ according to the date of extraction of the data.

#### **CLEARED CRIMINAL INCIDENTS**

A cleared criminal incident is one which, in the view of police, has been satisfactorily cleared by charge or otherwise.

An incident is cleared by charge when police have laid a charge or an information against at least one person. The information may have been laid with a view to the issuing of a warrant, summons or other process for the purpose of bringing an offender before the court.

A criminal incident is cleared other than by charge when, under normal circumstances, a charge or information would have been laid against at least one person, but, for a variety of reasons, police have been unable to make an arrest, despite knowing the identity of the offender and having sufficient evidence to support a charge. Examples of situations in which an offence may be cleared other than by charge include the following:

- the offender is a juvenile and is cautioned;
- the offender has died before a charge is made or information laid;
- the offender has been committed to a psychiatric institution and is unlikely to be released;
- there is an obstacle to charging, such as diplomatic immunity;
- the complainant or essential witness is dead and proceedings would be aborted;
- the offender is serving a sentence and police consider that no useful purpose would be served by prosecution.

#### **REGIONAL STATISTICS**

Statistics are provided on the number of criminal incidents (victims for murder) recorded for each of the Statistical Divisions of NSW as defined by the Australian Bureau of Statistics. Within the Sydney Statistical Division, statistics are provided for Statistical Subdivisions. Recorded criminal incidents which occurred in correctional, detention or remand centres, however, are not counted in the Statistical Division in which the incident occurred. Numbers of such incidents are noted at the foot of each table. Appendix 2 provides maps indicating the location of each Statistical Division and Sydney Statistical Subdivision. Appendix 3 lists the Local Government Areas within each of the Statistical Divisions and Statistical Subdivisions. A criminal incident is counted within a particular region when the location of the offence falls within that region.

For the rate calculations, population data were obtained from the Australian Bureau of Statistics publications: *Population, New South Wales, 30 June 1997,* Cat. No. 3234.1 (for 1996 population estimates), and *Population, New South Wales, 30 June 1998,* Cat. No. 3234.1 (for 1997 and 1998 population estimates).

#### ORGANISATION OF THE REPORT

The report is organised into four main sections as follows. First, there is an overview of major trends in recorded criminal incidents (recorded victims for murder) over the two-year period from January 1997 to December 1998. Figures showing trends in selected offences are presented, as well as an analysis indicating which trends are statistically significant.

The second section presents, for all categories of offence, the monthly numbers of recorded criminal incidents (recorded victims for murder and manslaughter). There are three tables in this section, one each for 1996, 1997 and 1998. Each table provides a total for the year and the annual rate per 100,000 population. The data used for the trend analysis in the first section of the report are included in these tables. Note, however, that the trend analysis uses only the most recent two years of data.

The third section provides the numbers and percentages of cleared criminal incidents, for selected types of offence, for 1996, 1997 and 1998. The offence types included in these tables are those where the crime is likely to have been reported to police, rather than discovered or detected by police. Offence types where the numbers of recorded criminal incidents are influenced by police law enforcement activity (drug offences, for example) are excluded. For such offence types the clear-up percentages are very high because clearing the offence generally occurs simultaneously with its detection (that is, an arrest is made when the crime is discovered).

The tables for 1996 and 1997 show the number of recorded criminal incidents and, of these, the number which had been cleared 30 days, 90 days and 180 days after the incident was reported to police. The tables also include clear-up percentages, which show the proportions of recorded incidents which had been cleared within 30, 90 and 180 days of reporting. The table for 1998 is similar to those for 1996 and 1997 except that there are only two follow-up periods, 30 days and 90 days. Because the data for this report were extracted in January 1999, the clear-up status after 90 days could not be determined for any offences reported in the last three months of 1998. Hence, the clear-up data for 1998 are for the first nine months of the year only.

In the fourth section of the report there are 30 tables, one for each major offence category. Each table gives the numbers and rates (per 100,000 population) of recorded criminal incidents (for murder, recorded victims) for the periods January to December 1996, January to December 1997 and January to December 1998, for each of the NSW Statistical Divisions and for each Statistical Subdivision in Sydney. Recorded criminal incidents which occurred in custodial institutions are counted separately; they are not included in the data for the Statistical Division where the custodial institution is located. Note that both the numbers and rates of recorded criminal incidents in 1997 have been updated since the previous edition.

# OVERVIEW OF MAJOR TRENDS

#### **OVERVIEW OF MAJOR TRENDS**

#### TRENDS IN RECORDED CRIME

However trends in recorded crime are presented, their interpretation is a difficult task. The recorded criminal incident data presented in this report are based on information derived from the NSW Police Service Computerised Operational Policing System, so only those incidents which are reported to, or detected by, police are included. The trends in recorded crime shown in this report will, therefore, reflect movements in the underlying factors which influence the detection, reporting and recording of crime, as well as changes in the true level of crime in the community.

An alternative measure of the level of crime in NSW is available from crime victim surveys, for example the *Crime and Safety Survey* which is conducted annually by the Australian Bureau of Statistics (ABS).¹ As well as providing an estimate of the victimisation rate in the community for a selected set of offences, this survey measures the proportion of crimes which are not reported to police, and are therefore not recorded in the official statistics. In particular, personal crimes, such as assault and robbery, are less likely to be reported than crimes which involve households. For example, *Crime and Safety, New South Wales, 1997* shows that, in the twelve-month period to April 1997, while almost 97 per cent of motor vehicle thefts and 71 per cent of break and enter offences (crimes against 'households') were reported to police, only 43 per cent of all alleged assault offences and 19 per cent of sexual assault offences were reported during that period.² Given that some offences have low reporting rates, it is possible that changes in recorded crime rates over time for these offences largely reflect changes in reporting rates.

Public willingness to report crime, however, is just one of the extraneous factors which can affect trends in recorded crime. Shifts in policing policy can also have a marked effect on the number of recorded drug offences, drink driving offences, cases of offensive behaviour or of receiving stolen goods. For these offences, therefore, recorded rates probably do not accurately reflect actual rates. For this reason, the more detailed comparisons of crime rates and examination of trends in this document are restricted to categories of offence which are reported to, rather than detected by, police.

The interpretation of trends in official reports of crime can be considerably more difficult than the interpretation of trends in unemployment or inflation statistics. The ease with which recorded crime statistics can be misunderstood creates a temptation to offer an authoritative explanation for each major crime trend. Indeed, in many instances it is simply impossible to state with any assurance why a particular trend has appeared. This report, therefore, confines itself to identifying and describing trends in recorded crime, rather than explaining them.

The trends examined in this overview cover a twenty-four month period, from January 1997 to December 1998. For comparative purposes, statistics for 1996 have been included in the detailed tables in the sections which follow. For some offence categories, separate trends have been presented for various offence subcategories; in particular, sexual offences, robbery, break and enter, and stealing offences have been further disaggregated.

For each offence category or subcategory except murder, a statistical test for trend was applied to the monthly numbers of recorded criminal incidents over the twenty-four month period from January 1997 to December 1998.<sup>3</sup> In the case of murder, the statistical test for trend was applied to the monthly numbers of victims over the same period. For those offences where a statistically significant trend was found, the extent of the trend is indicated by the percentage change between the total recorded number of incidents for the twelve months of January to December 1997 and the total recorded number of incidents for the same period in 1998.

#### **SUMMARY OF TRENDS**

In the following summary the bracketed figures denote the percentage change in the total number of recorded criminal incidents between the consecutive twelve-month periods January to December 1997 and January to December 1998.

#### Significant downward trends

There was a statistically significant downward trend in the monthly numbers of recorded criminal incidents for the following offences:

- sexual assault (down by 14.1%; see Figure 3)
- indecent assault, act of indecency and other sexual offences (down by 18.7%; see Figure 3).

#### Offences where there was no upward or downward trend

There was no statistically significant generally upward or downward trend in the monthly numbers of recorded criminal incidents<sup>4</sup> for any of the following offences:

- murder (see Figure 1)
- robbery without a weapon (see Figure 4)
- robbery with a firearm (see Figure 4)
- motor vehicle theft (see Figure 6)
- steal from retail store (see Figure 7)
- steal from person (see Figure 7)
- fraud (see Figure 8).

#### Significant upward trends

There were statistically significant upward trends in the monthly numbers of recorded criminal incidents for the following offences:

- assault (up by 6.2%; see Figure 2)
- robbery with a weapon not a firearm (up by 29.7%; see Figure 4)
- break and enter dwelling (up by 7.0%; see Figure 5)
- break and enter non-dwelling (up by 6.8%; see Figure 5)
- steal from motor vehicle (up by 5.9%; see Figure 6)
- steal from dwelling (up by 7.7%; see Figure 7)
- malicious damage to property (up by 11.9%; see Figure 9).

#### **DESCRIPTION OF TRENDS**

The discussion which follows includes comparisons of recorded crime rates, for a selected set of offences, between Statistical Divisions of NSW. In addition, within the Sydney Statistical Division, recorded crime rates are detailed by Statistical Subdivision. The rate calculations are based on resident population data and are calculated as recorded offences per 100,000 population in each Statistical Division or Subdivision.<sup>5</sup> It should be noted that the Inner Sydney Statistical Subdivision has high recorded crime rates because, compared with other regions, the resident population is small relative to the 'transient' or non-resident population which uses the area for business, entertainment, shopping, etc. That is, the high transient population is not reflected in the rate calculation.

#### Murder

Figure 1 shows the recorded number of murder victims for each month from January 1997 to December 1998. There was no statistically significant upward or downward trend in the number of murder victims over this period. It is clear that, with such small numbers of victims, the month to month variation is extremely marked. For this reason it is difficult to detect trends over such a short period.

Figure 1: Murder

97 97 97 97 97 97 97

Table 3.1 shows the regional distribution for murder from January 1997 to December 1998. Because of the small numbers of murder victims, it is not sensible to make regional comparisons.

Jan Feb Mar Apr May Jun Jul Aug Sep Oct Nov Dec Jan Feb Mar Apr May Jun Jul Aug Sep Oct Nov Dec

98

97 97 98 98 98 98 98

97

#### **Assault**

Figure 2 shows the recorded number of assault incidents between January 1997 and December 1998. There was a statistically significant upward trend for assault over this period (up by 6.2% from 1997 to 1998).

Figure 2: Assault

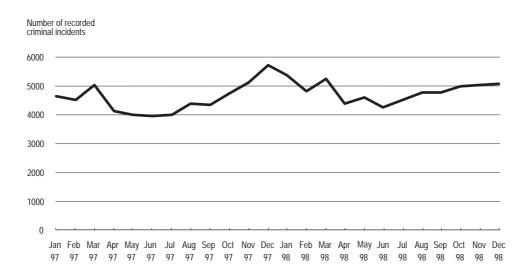

Table 3.2 shows that from January to December 1998, the highest rate of assault in NSW was recorded in the Far West Statistical Division (2,402.1 incidents per 100,000 population). There were also high rates of assault recorded in the North Western Statistical Division (2,216.1 per 100,000) and in the Inner Sydney Statistical Subdivision (2,097.2 per 100,000). The rate in each of the above three regions was more than double the rate for NSW (909.0 per 100,000).

Of the three regions which recorded the highest rates of assault in 1998, however, only one region recorded an increase in the assault rate between 1997 and 1998. While the rate for the Far West Statistical Division and the Inner Sydney Statistical Subdivision remained relatively stable over this two-year period, the rate of assault in the North Western Statistical Division increased substantially between 1997 and 1998 (an increase of 10.0%). The highest percentage increases in the assault rate in NSW over this two-year period were recorded in the Murrumbidgee, Mid-North Coast and Richmond–Tweed Statistical Divisions of NSW, with increases of 24.7 per cent, 17.9 per cent and 17.8 per cent, respectively.

Of the regions detailed in Table 3.2, the lowest rates of assault were in geographical regions within the Sydney Statistical Division. In 1998, the Hornsby–Ku-ring-gai Statistical Subdivision recorded the lowest rate of assault (259.1 per 100,000), followed by the Lower Northern Sydney Statistical Subdivision (376.9 per 100,000). Each of these rates was less than half of the average NSW rate. Furthermore, the assault rate remained relatively stable within the Sydney Statistical Division between 1997 and 1998.

#### **Sexual offences**

For the period from January 1997 to December 1998, Figure 3 presents the number of recorded incidents of sexual offences separately for sexual assault and for indecent assault, act of indecency and other sexual offences. There were statistically significant downward trends in each series over this period, with a 14.1 per cent decrease in the recorded rate of sexual assault between 1997 and 1998, and an 18.7 per cent decrease in the recorded rate of indecent assault, act of indecency and other sexual offences.

Figure 3: Sexual assault and indecent assault, act of indecency, other sexual offences

Inspection of Table 3.3 shows that the highest rate of sexual assault from January to December 1998 was recorded in the Far West Statistical Division (142.3 incidents per 100,000 population), followed by the North Western Statistical Division of NSW (80.2 per 100,000). The highest rate in the Sydney Division was recorded in the Inner Sydney Statistical Subdivision (75.2 per 100,000).

The lowest rates of sexual assault during 1998 were recorded in the areas within the Sydney Statistical Division which had also recorded lower than average rates of non-sexual assault during 1998. In 1998, Hornsby–Ku-ring-gai recorded the lowest rate of sexual assault (15.7 per 100,000), followed by the Lower Northern Sydney Statistical Subdivision (18.5 per 100,000). Each of these rates is less than half of the average NSW rate of 48.8 recorded incidents per 100,000 resident population. Note that between 1997 and 1998, the statewide decrease in the rate of sexual assault was widespread across NSW with most geographical regions recording a marked decrease in the rate of this offence over this time period.

Table 3.4 shows that for 1998 the highest rate of indecent assault, act of indecency and other sexual offences was recorded in the Inner Sydney Statistical Subdivision (130.3 per 100,000), followed by the Murrumbidgee and the Far West Statistical Divisions of NSW (118.1 and 109.7 per 100,000 population, respectively). The overall rate for NSW in 1998 was 79.0 per 100,000 population. The lowest rates of indecent assault, act of indecency and other sexual offences were recorded in areas within the Sydney Statistical Division. Between 1997 and 1998, most geographical regions of NSW recorded a decrease in the rate of this offence.

#### Robbery

Figure 4 presents recorded numbers of robbery incidents separately for robbery without a weapon, robbery with a firearm and robbery with a weapon other than a firearm over the period January 1997 to December 1998. There was no statistically significant upward or downward trend for either of the offences robbery without a weapon or robbery with a firearm during this period. There was a statistically significant upward trend, however, in the number of recorded incidents of robbery with a weapon other than a firearm (up by 29.7% from 1997 to 1998).

Figure 4: Robbery with and without a weapon

Tables 3.5, 3.6 and 3.7 present the regional distribution of the recorded rates of each subcategory of robbery incident. These figures indicate that robbery offences in NSW are more likely to occur in the Sydney Statistical Division than elsewhere in NSW. For example, on a per capita basis, the recorded rate of robbery with a weapon other than a firearm in the Sydney Statistical Division during 1998 was more than four times the rate in country NSW (i.e. all Statistical Divisions excluding Sydney). For each robbery subcategory, the highest rate of recorded incidents in 1998 occurred in the Inner Sydney Statistical Subdivision.

Inner Sydney's rate for robbery without a weapon shown in Table 3.5 (626.8 recorded incidents per 100,000 population) was more than six times as high as the corresponding rate for the State (101.9 per 100,000). High rates of this offence were also recorded in the Canterbury–Bankstown and Fairfield–Liverpool Statistical Subdivisions of Sydney (192.0 and 187.2 incidents per 100,000 population, respectively).

The lowest rates within NSW of robbery without a weapon were mostly recorded in country regions; in particular, the lowest rates for this offence in 1998 were recorded in the Murray and the South Eastern Statistical Divisions of NSW (19.7 and 20.5 incidents per 100,000 population, respectively).

Following a sustained increase in the number of recorded incidents of robbery without a weapon between 1995 and 1997, many regions within the Sydney Statistical Division showed a sizeable decrease in the rate of this offence between 1997 and 1998. In particular, large percentage decreases in the rate of robbery without a weapon between 1997 and 1998 were recorded in the Blacktown–Baulkham Hills (down by 30.4%), Inner Western Sydney (down by 23.1%) and Central Western Sydney Statistical Subdivisions (down by 16.8%). Large percentage increases in the rate of this offence between 1997 and 1998, however, occurred in the Canterbury–Bankstown (up by 19.6%) and Fairfield–Liverpool Statistical Subdivisions (up by 15.4%), resulting in a 1998 rate in each of these two regions almost double the NSW rate.

Robbery with a firearm, the least prevalent of the robbery offences in NSW overall, is again concentrated in the Sydney region (see Table 3.6). Inner Sydney's rate for robbery with a firearm (55.4 per 100,000) was almost four times as high as the State rate (14.4 per 100,000). The next highest rate of robbery with a firearm recorded in NSW during 1998 was in the Canterbury–Bankstown Statistical Subdivision (31.8 per 100,000), followed by the Fairfield–Liverpool (29.0 per 100,000), Central Western Sydney (28.1 per 100,000) and Inner Western Sydney Statistical Subdivisions (24.0 per 100,000). Overall, areas in country NSW exhibited low rates of robbery with a firearm in 1998.

Most regions in NSW experienced a decrease in the recorded rate of this robbery subcategory between 1997 and 1998. In particular, several regions within the Sydney Statistical Division recorded a large percentage decrease in the rate of robbery with a firearm during this period. The largest percentage decrease in Sydney was recorded in the Inner Western Sydney Statistical Subdivision (down by 52.4%), followed by the St.George–Sutherland (down by 34.7%), Lower Northern Sydney (down by 32.1%) and Blacktown–Baulkham Hills Statistical Subdivisions (down by 31.3%).

Inner Sydney's rate for robbery with a weapon other than a firearm shown in Table 3.7 (396.4 per 100,000) was almost six times as high as the State rate (69.2 per 100,000). Rates in 1998 for this offence were highest in the Sydney region, with higher than average rates recorded in several Statistical Subdivisions including Inner Western Sydney (144.6 per 100,000), Canterbury–Bankstown (139.8 per 100,000), Fairfield–Liverpool (133.8 per 100,000), and Central Western Sydney (111.9 per 100,000). The lowest rates of robbery with a weapon other than a firearm were recorded in country NSW regions. Between 1997 and 1998, sizeable percentage increases were recorded in the rate of robbery with a weapon other than a firearm in most geographical areas of NSW, particularly within the Sydney Statistical Division.

#### **Break and enter**

Break and enter is one of the most frequently occurring serious offences. Figure 5 presents the recorded number of incidents of break and enter over the period January 1997 to December 1998 separately for dwellings and non-dwellings. There was a statistically significant upward trend for both subcategories of break and enter over this period (up 7.0% for break and enter – dwelling, and 6.8% for break and enter – non-dwelling, from 1997 to 1998).

Figure 5: Break and enter – dwelling and non-dwelling

Table 3.8 shows the regional distribution for recorded incidents of break and enter – dwelling. In 1998, the four highest rates recorded in NSW were from subdivisions within the Sydney Statistical Division. The highest recorded rate was in the Inner Sydney Statistical Subdivision (2,448.2 incidents per 100,000 population). This rate was almost two times that of the State (1,346.6 per 100,000). Outside Sydney, the highest recorded rate of break and enter – dwelling was in the North Western Statistical Division (1,714.1 per 100,000). While the recorded rate of break and enter – dwelling remained relatively stable in the Sydney Statistical Division between 1997 and 1998, most country regions of NSW showed an increase in the rate of this offence over this time period.

Table 3.9 presents the regional distribution for recorded incidents of break and enter – non-dwelling. In 1998, the recorded rate for the Sydney Statistical Division (651.1 incidents per 100,000 population) was slightly lower than the rate for the entire State (765.4 per 100,000). Nonetheless, the highest recorded rate occurred in the Inner Sydney Statistical Subdivision (1,652.8 per 100,000) with a rate more than two times as high as the State average. Outside Sydney, the highest recorded rates of break and enter – non-dwelling occurred in the North Western (1,365.0 per 100,000) and the Far West Statistical Divisions (1,243.8 per 100,000). Overall, in 1998, the recorded rates of break and enter – non-dwelling offences were generally highest in the country areas of NSW.

#### Motor vehicle theft and steal from motor vehicle

Figure 6 presents the number of recorded incidents of motor vehicle theft and of steal from motor vehicle for the period January 1997 to December 1998. Both of these offences occur frequently in NSW, particularly in areas within the Sydney Statistical Division. There was no statistically significant upward or downward trend in the number of monthly recorded incidents of motor vehicle theft in NSW during this period, but there was a statistically significant upward trend for the steal from motor vehicle offence category (up by 5.9% from 1997 to 1998).

Figure 6: Motor vehicle theft and steal from motor vehicle

Table 3.11 shows that between January and December 1998, the highest recorded rate of motor vehicle theft incidents was in the Inner Sydney Statistical Subdivision (2,261.2 per 100,000 population), which was more than two and a half times as high as the State rate (847.1 per 100,000). Other Sydney Statistical Subdivisions with high rates were the Canterbury–Bankstown (1,442.2 per 100,000), Fairfield–Liverpool (1,322.6 per 100,000) and Central Western Sydney Statistical Subdivisions (1,231.2 per 100,000). The

lowest rates of motor vehicle theft during 1998 were mostly recorded in the country regions of NSW. Note that between 1997 and 1998, the recorded rate of motor vehicle theft decreased in most Subdivisions within the Sydney Statistical Division.

Table 3.12 shows that in 1998, the Inner Sydney Statistical Subdivision also had the highest recorded crime rate for stealing from motor vehicles. The rate for Inner Sydney (4,552.5 recorded incidents per 100,000 population) was almost four times as high as that for NSW as a whole (1,186.7 per 100,000). The next highest rates were in the Eastern Suburbs (1,499.2 per 100,000) and in the Inner Western Sydney Statistical Subdivisions (1,406.7 per 100,000). The lowest rates of steal from motor vehicle in 1998 were generally recorded in the country regions of NSW.

#### **Stealing**

Stealing (not including break and enter or motor vehicle theft or steal from motor vehicle) is an offence frequently recorded in NSW. Figure 7 shows separately the trends in the recorded number of incidents of steal from retail store, steal from dwelling and steal from person. Over the period from January 1997 to December 1998, there was no statistically significant upward or downward trend for the monthly numbers of steal from retail store or of steal from person incidents. However, there was a statistically significant upward trend in the number of recorded incidents for steal from dwelling over this time period (up by 7.7% from 1997 to 1998).

Figure 7: Steal from retail store, from dwelling and from person

Table 3.13 shows that from January to December 1998, the highest rate of steal from retail store was recorded for Inner Sydney (849.3 incidents per 100,000 population), followed by the Central Western Sydney Statistical Subdivision (513.5 per 100,000). The lowest rate of steal from retail store incidents was recorded in the Hornsby-Ku-ring-gai Statistical Subdivision (131.7 per 100,000). Most areas within the Sydney Statistical Division showed a decrease in the rate of this offence between 1997 and 1998.

Table 3.14 shows that in 1998, the Far West Statistical Division of NSW had the highest recorded rate for steal from dwelling (1,113.7 incidents per 100,000 population), followed by the Inner Sydney Statistical Subdivision (819.5 per 100,000) and the North Western Statistical Division of NSW (781.1 per 100,000). The lowest rates for this offence category during 1998 were recorded in areas within the Sydney Statistical Division.

Between 1997 and 1998, most geographical regions of NSW recorded an increase in the rate of steal from dwelling offences. In particular, large percentage increases were recorded in the Inner Sydney Statistical Subdivision (up by 23.8% from 1997 to 1998), and the Central West (up by 20.5%) and South Eastern Statistical Divisions of NSW (up by 20.1%).

Table 3.15 shows that in 1998, Inner Sydney had the highest recorded rates for steal from person (1,561.6 incidents per 100,000 population), which was at least five times as high as the rate for any other region. The next highest rates were all in areas within the Sydney Statistical Division. The lowest rates of this offence in 1998 were mostly recorded in country areas of NSW.

#### Fraud

Figure 8 presents the number of recorded incidents of fraud (excluding credit card fraud) over the period January 1997 to December 1998. There was no statistically significant upward or downward trend in the number of incidents of fraud recorded over this period. Fraud is an offence for which the recorded rate is strongly influenced by variations in both police ability to detect incidents and public willingness to report incidents. Thus, it is difficult to detect true changes in the rate of fraud incidents.

Figure 8: Fraud

Table 3.16 shows that in 1998, the Inner Sydney Statistical Subdivision had the highest recorded rate of fraud incidents (1,143.9 per 100,000 population), almost three times as high as that for NSW (390.6 per 100,000). The Lower Northern Sydney Statistical Subdivision had the second highest recorded rate of fraud (531.8 per 100,000), followed by the Murrumbidgee Statistical Division (515.3 per 100,000). The lowest rate of fraud during 1998 was recorded in the Hornsby–Ku-ring-gai Statistical Subdivision (165.1 per 100,000).

#### Malicious damage to property

Figure 9 shows the number of recorded incidents of malicious damage to property (other than arson) from January 1997 to December 1998. There was a statistically significant upward trend in the number of incidents of malicious damage to property recorded over this period, with an 11.9 per cent increase recorded between 1997 and 1998.

Figure 9: Malicious damage to property

Inspection of Table 3.17 reveals that the highest rate in recorded incidents of malicious damage to property in 1998 occurred in the Inner Sydney Statistical Subdivision (2,341.7 incidents per 100,000 population). The overall rate for NSW in 1998 was 1,406.8 incidents per 100,000 population. Outside Sydney, the highest recorded rates occurred in the Far West and North Western Statistical Divisions (2,300.5 and 2,131.6 per 100,000, respectively). During 1998, the lowest rates of malicious damage to property were recorded in areas within the Sydney Statistical Division.

Between 1997 and 1998, most geographical regions in NSW recorded an increase in the rate of malicious damage to property offences. The percentage increases recorded for this offence in the country regions of NSW were generally higher than for areas within the Sydney Statistical Division.

#### **NOTES**

- 1 Australian Bureau of Statistics 1997, Crime and Safety, New South Wales, April 1997, Cat. No. 4509.1, ABS, Sydney.
- 2 ibid. Care should be taken in the interpretation of sexual assault data from the survey because of the small sample size and resultant high level of sampling variability.
- The trend test used was Kendall's rank-order correlation test (see, for example, Conover, W.J. 1980, *Practical Non-Parametric Statistics*, 2nd edn, John Wiley & Sons, pp. 256-260). A two-tailed test was used to determine whether there had been an increasing or decreasing trend in the recorded numbers of criminal incidents over the most recent twenty-four month period covered in the report. Some month to month variations in the numbers of recorded incidents could be due in part to seasonal factors. The test for trend is not sensitive to seasonal variations; it is sensitive only to a generally increasing or generally decreasing trend over the time period examined.
- 4 In the case of murder, there was no statistically significant trend in the monthly numbers of recorded victims.
- For the rate calculations, population data were obtained from the Australian Bureau of Statistics publications: *Population, New South Wales, 30 June 1997*, Cat. No. 3234.1 (for 1996 population estimates), and *Population, New South Wales, 30 June 1998*, Cat. No. 3234.1 (for 1997 and 1998 population estimates).
