ACKNOWLEDGEMENTS

The production of this report was greatly assisted by officers within the NSW Police Force. Special thanks are due to officers in Business and Technology Services and in Corporate Information, Executive Support Group. The following officers of the NSW Bureau of Crime Statistics and Research contributed significantly to the production of this report. Thanks to Darren Kwok for processing the data contained in the report, Derek Goh for preparing the report and Jessie Holmes for reviews and presentation improvements.

INTRODUCTION

This report presents data on crime reported to, or detected by, the NSW Police Force from January 1995 to June 2019, with a focus on the statistical trends for the 24 months ending June 2019. The data were extracted from the Computerised Operational Policing System (COPS) of the NSW Police Force in August 2019.

The report includes an overview of trends in the most recent two-year period for major offence categories, firstly for NSW and then across NSW regions broken down to the Local Government Area (LGA) level. At the State level, for the latest 24-month period, one major offence category have been trending upwards: steal from retail store (up 6.5%) and one of the 17 major offence categories were trending downwards: steal from person (down 12.3%).

The NSW graphs for rates of violent and property offences are on page 9 of the report. For violent offences using the 12-month moving average (light grey line) we can see a downward path from 2004, which has stabilised over the last 5 years. The trend tests shown in Table 1.1 indicate that for the latest 24-month period, one NSW Statistical Area have a significant upward trend in violent crime: Central West (up 7.8%) and no NSW Statistical Area have a significant downward trend in violent crime.

The property offences graph using the 6-month moving average (light grey line) indicates a strong downward path from 2000 to 2010, after which there are further declines but at a slower rate. Table 1.1 showing trend tests on the levels of property offences in NSW indicates a significant decrease over the last 5 years for NSW. For the latest 24-month period, one NSW Statistical Area have a significant upward trend in property crime: Murray (up 15.9%) and no NSW Statistical Area have a significant downward trend in property crime.

Sydney LGA can be considered a special case since the population used to calculate the rate is much lower than the population using the area for work and entertainment. This will be reflected in higher incident rates.

^ *This table summarises the aggregate outcomes of statistical tests for significant upward or downward trends in the number of recorded criminal incidents in major offence categories over a 24-month period across all NSW LGAs with a population of 3,000 or more. The trend test used is Kendall's rank-order correlation test. A trend test was not performed if there were fewer than 20 incidents in either of the two years for the period in question, hence no trend tests for* **murder** *were calculated for this table. These tests were carried out on 17 major offence categories.*

^ *For further explanation of **trend results**, see page 44, Notes [5] and [6].*

* *There were no LGAs with 20 murder victims, hence no trend tests were reported. The trend test for NSW on the offence of murder is for the number of victims, not incidents.*

^ *For further explanation of **rate calculation populations** and the **ratio to NSW rate**, see page 44, Footnote 2 and Note [8]. A result of ' . ' indicates either that there were no relevant offences recorded in the LGA, or that the population is less than 3,000 people and no rate was calculated.*
Sydney LGA can be considered a special case since the population used to calculate the rate is much lower than the population using the area for work and entertainment and this will be reflected in higher incident rates.
* *The ratios given on the offence of murder are calculated for the number of victims, not incidents, and must be treated with caution since for LGAs with relatively small populations a single murder victim will result in relatively high ratio to state.*

APPENDICES

APPENDIX 1: TRENDS IN RECORDED CRIMINAL INCIDENTS FOR NSW

[1] Irrespective of how trends in recorded crime are presented, their interpretation is a difficult task. The recorded criminal incident data presented in this report are based on information derived from the NSW Police Force Computerised Operational Policing System (COPS), so only those incidents which are reported to, or detected by, police are included. The trends in recorded crime shown in this report will, therefore, reflect movements in the underlying factors which influence the detection, reporting and recording of crime, as well as changes in the true level of crime in the community.

[2] An alternative measure of the level of crime in Australia is available from crime victim surveys, for example the national Crime Victimisation Survey by the Australian Bureau of Statistics (ABS)[1]. As well as providing an estimate of the victimisation rate at the State level for a selected set of offences, this survey estimates the proportion of crimes which are not reported to police, and are therefore not recorded in the official statistics. In particular, personal crimes, such as assault and robbery, are less likely to be reported than crimes which involve households. These surveys generally find that about half of physical assault victims aged 15 and over report the incident to police whereas break-ins are reported to police approximately three quarters of the time. Given that some offences have low reporting rates, it is possible that changes in recorded crime rates over time for these offences may be reflecting changes in reporting rates.

[3] Public willingness to report crime, however, is just one of the extraneous factors which can affect trends in recorded crime. Shifts in policing policy can also have a marked effect on the number of recorded drug offences, cases of offensive behaviour or of receiving stolen goods. For these offences, therefore, recorded rates probably do not accurately reflect actual rates. For this reason, the more detailed comparisons of crime rates and examination of trends in this document are restricted to offence categories which are more likely to be reported to, rather than detected by police.

[4] The interpretation of trends in official reports of crime can be considerably more difficult than the interpretation of trends in unemployment or inflation statistics. The ease with which recorded crime statistics can be misunderstood creates a temptation to offer an authoritative explanation for each major crime trend. Indeed, in many instances it is simply impossible to state with any assurance why a particular trend has appeared. This report, therefore, confines itself to identifying and describing trends in recorded crime, rather than explaining them.

[5] For each offence category or subcategory (except murder), a statistical test for trend was applied to the monthly numbers of recorded criminal incidents over the relevant period. In the case of murder, the statistical test for trend was applied to the monthly numbers of victims over the period. The trend test used was Kendall's rank-order correlation test (see, for example, Conover, W.J. 1980, Practical Non-Parametric Statistics, 2nd ed, John Wiley and Sons, pp 256-260). A two-tailed test was used to determine whether there had been an increasing or decreasing trend in the recorded numbers of criminal incidents over the relevant period covered in the report. Some month to month variations in the numbers of recorded incidents could be due in part to seasonal factors. The test for trend is not sensitive to seasonal variations; it is sensitive only to a generally increasing or generally decreasing trend over the time period examined.

[6] For the trend tests throughout this publication, where a statistically significant trend was found ($p < .05$), the extent of the trend is indicated by the percentage change in the total number of recorded criminal incidents between the latest two consecutive 12-month periods for 24 month tests; and the average annual percentage change between the first 12-month period and the latest 12-month period for longer tests. A trend test was not performed if there were fewer than 20 incidents in any of the years for the period in question. The result ' . ' indicates that a trend test was not performed. A non-significant test result ($p > .05$) is denoted by 'Stable' or by 'ns' in some larger LGA tables.

[7] In order to present an overview of crime trends in NSW the information in Section 1 relates to aggregate violent and property crime. The State graphs for violent and property offences are plotted as monthly rates[2] per 100,000 population. The State graph for violent offences shows distinct seasonality and the 12-month moving average (light grey line) indicates a downward path since 2004, which has stabilized over the past five years, whilst the property offences graph and the 6-month moving average (light grey line) both indicate a strong downward path since about 2000. Violent offences include: murder, attempted murder, manslaughter, assault - domestic violence related, assault - non-domestic violence related, assault police, robbery without a weapon, robbery with a firearm, robbery with a weapon not a firearm, sexual assault and indecent assault / act of indecency / other sexual offences. Property offences include: break and enter dwelling, break and enter non-dwelling, motor vehicle theft, steal from motor vehicle, steal from retail store, steal from dwelling, steal from person, stock theft, other theft and fraud.

[8] The ratio to NSW rate statistics are a comparison of a NSW regional rate per 100,000 population to the NSW rate per 100,000 population[2]. A ratio of one indicates parity with the NSW rate. Ratios indicating double the NSW rate (or more) before rounding are highlighted in red, whilst ratios indicating half the NSW rate (or less) before rounding are highlighted in yellow.

APPENDIX 2: DEFINITIONS AND EXPLANATORY NOTES

The data in this report are extracted from the NSW Police Force's Computerised Operational Policing System (COPS). This system is used for record-keeping for all police operations, not just for criminal matters.

In this report:
- the counting units are recorded *criminal incidents* rather than recorded *offences* (except for murder and manslaughter, where the counting units are victims); and
- the data are categorised by date of *reporting* to police (or date of detection by police) rather than by date of *occurrence* of the offence (except for alleged offender data, where the data is categorised by date the alleged offender was proceeded against).

RECORDED CRIMINAL INCIDENTS

A criminal incident is defined as an activity detected by or reported to police which:
- involved the same offender(s);
- involved the same victim(s);
- occurred at the one location;
- occurred during one uninterrupted period of time;
- falls into one offence category;
- falls into one incident type (for example, 'actual', 'attempted', 'conspiracy').

One incident may involve two offenders assaulting the same victim. This would be recorded as one assault incident. Alternatively, suppose a man reports to police that he found his neighbour in the process of damaging his car and, when confronted, the neighbour assaulted him. For such an event, two criminal incidents are recorded because two distinct offence types are involved (malicious damage to property and assault) even though the same parties were involved at the same time and in the same place.

RECORDED VICTIMS

For murder and manslaughter only, the counting units used are victims. Under the definition of a criminal incident (same parties, same time, same place, same offence and same incident type) one murder or manslaughter incident could involve two or more persons being killed. Because of the seriousness of these offences and their relatively small numbers, it is considered to be more appropriate to count the number of victims, rather than the number of criminal incidents. Hence, where one murder incident involves a person killing six people, six murder victims are counted.

OFFENCE CATEGORIES

The classification of offences in this report is broadly based on the Australian and New Zealand Standard Offence Classification (ANZSOC) devised by the Australian Bureau of Statistics (*ABS 2011, third edition, Cat. No. 1234.0*).

For all types of offence classifications used in the report, Appendix 3 lists the offence categories included in the classification. The original offence incident categories are those used by the NSW Police Force and do not necessarily correspond exactly with offences as defined in legislation.

MAJOR OFFENCE CATEGORIES

Major offence categories include the most serious personal violence and property offences. The most serious of these offences is *murder* for which the incident count is the number of victims. Assault offences include the two major offence categories of *domestic violence related assault* and *non-domestic violence related assault*. All sexual offences are categorised by the two major offence types, either as *sexual assault* or *indecent assault, act of indecency and other sexual offences*.

Robbery offences are sorted into three categories by use of weapon: *robbery with a firearm, robbery with a weapon not a firearm* or *robbery without a weapon*. The serious theft offences in this group start with the burglary categories of *break and enter - dwelling* and *break and enter - non-dwelling* followed by *motor vehicle theft* and *steal from motor vehicle*. Other theft offences included in the 17 major offences are *steal from retail store*, *steal from dwelling*, *steal from person* and *fraud*. The final property offence listed as a major offence is *malicious damage to property*.

APPENDIX 2: DEFINITIONS AND EXPLANATORY NOTES *continued*

COUNTING PERIOD

Criminal incidents are included in the counting period in which they were reported to or detected by police.

In most cases criminal incidents are recorded on COPS on the day of reporting. However there may be some time delay before the incident gains the status of accepted and verified (which are necessary conditions for inclusion in this report). It is therefore possible for some updating of data to occur. That is, data extracted for a specified period of time may differ according to the date of extraction of the data.

In recent years some historic murders have been re-entered on the COPS system after being referred to the unsolved homicide squad. Murders that were first reported to NSW Police prior to the introduction of COPS in 1995 but recorded on COPS in recent years are excluded from the statistics. Murders which took place prior to 1995 but were first reported to Police in or after 1995 are included in the statistics.

PROCEEDINGS AGAINST ALLEGED OFFENDERS

Police may proceed against alleged offenders through a variety of legal or other processes. Alleged offenders who are not legally proceeded against are not included in this report. Most alleged offenders are referred to the NSW Criminal Courts. The more serious offences are dealt with by way of a Bail Court Attendance Notice (CAN) or a No-Bail CAN. In these instances, the alleged offender is arrested, taken to a police station, fingerprinted and the details of the person and all charges are recorded. A Bail CAN is used when a bail determination is required and a No-Bail CAN is used when a bail determination is not required.

Following changes to the Bail Act in May 2014, No-Bail CANs are used almost solely for incidents of 'Breach of bail conditions' and no bail determination is required because the original determination stands until a new determination is made by the court. Alternatively a Field CAN may be issued by police at other locations. A Future CAN is used for less serious offences.

Some alleged offenders are proceeded against but diverted from the criminal court system. For many minor offences police can issue Infringement Notices. By paying the prescribed penalty the offender avoids having to go to court. Under the *Young Offenders Act 1997,* a juvenile offender can be issued with either a warning, a caution or referred to a youth justice conference.

Youth Justice Conference and cautions data in previous reports have included juvenile offenders initially proceeded against to court by Police and then referred to a conference or given a caution under the Young Offenders Act by the court. From the 2015 report, they are now counted as being proceeded against to court by Court Attendance Notice as that was the method of proceeding used by the Police. Consequently data in this report is not comparable with data in previously published reports. Comparable data for previous years is available on request.

Data on warnings under the *Young offenders Act*, is available from January 2010 onwards. Due to changes in how warnings are recorded, this data series can not be compared with warning data previously published. A youth justice conference is a face-to-face meeting between offenders, victims and their support persons. The offending behaviour is discussed and an outcome plan for the offender negotiated. Note that both the police and the courts can refer a young person to a youth justice conference. However, the number of alleged offenders proceeded against by way of a youth justice conference, as shown in Table 4.1, includes only police referrals to a youth justice conference.

Since mid-2008, Police have issued compliance notices for breaches of liquor licensing regulations/legislation. Commonly these are for relatively minor breaches eg fail to display regulated signs. Liquor Offence Compliance Notices have been added to the recorded crime collection from the 2015 report. Consequently data in this report is not comparable with data in previously published reports. Comparable data for all years is available on request.

Each offender or alleged offender appears only once in the table for each event. Note that multiple criminal incidents may be associated with a single event. The processes are arranged in a hierarchy with the offender or alleged offender appearing in the most serious category where multiple incidents are involved. For example if an event involves two incidents and the alleged offender is charged for one incident but receives a caution for the second incident, the alleged offender appears only in the relevant 'proceeded against to court' category.

APPENDIX 2: DEFINITIONS AND EXPLANATORY NOTES *continued*

PROCEEDINGS AGAINST ALLEGED OFFENDERS continued

It should be noted that in previous annual recorded crime reports, data on alleged offenders were categorised by date of reporting to police (or date the incident was detected by police). Given there can be a delay between an event being recorded by police and police commencing legal proceedings this resulted in fewer alleged offenders being counted, particularly during the last three months of the reporting period. For this reason, since the 2017 annual report, alleged offender data is categorised by the date the alleged offender was proceeded against. Therefore in Section 4 the year refers to the year in which alleged offenders were proceeded against. It does not refer to the year in which a criminal incident or incidents were reported to police. For example, if an incident was reported to police in 2016 but the alleged offender was not apprehended and charged until 2017, the alleged offender is counted in 2017. As such, Section 4 of this report is not comparable with alleged offender data published prior to the 2017 annual report. Comparable data for all years is available on request.

CLEARED CRIMINAL INCIDENTS

A cleared criminal incident is one, which, in the view of police, has been satisfactorily cleared by the commencement of legal proceedings or otherwise.

An incident is cleared by the commencement of legal proceedings when police have laid a charge or an information against at least one person. The information may have been laid with a view to the issuing of a warrant, Future CAN or other process for the purpose of bringing an offender before the court.

A criminal incident is cleared other than by commencement of legal proceedings when, under normal circumstances, a charge or information would have been laid against at least one person, but, for a variety of reasons, police have been unable to make an arrest, despite knowing the identity of the offender and having sufficient evidence to support a charge. Examples of situations in which an offence may be cleared other than by charge include the following:

- the offender is a juvenile and is cautioned;
- the offender has died before a charge is made or information laid;
- the offender has been committed to a psychiatric institution and is unlikely to be released;
- there is an obstacle to charging, such as diplomatic immunity;
- the complainant or essential witness is dead and proceedings would be aborted;
- the offender is serving a sentence and police consider that no useful purpose would be served by prosecution.

The offence types included in these tables are those where the crime is likely to have been reported to police, rather than discovered or detected by police. Offence types where the numbers of recorded criminal incidents are influenced by police law enforcement activity (drug offences, for example) are excluded. For such offence types, the clear-up percentages are very high because clearing the offence generally occurs simultaneously with its detection (that is, an arrest is made when the crime is discovered). This report contains criminal incidents cleared within 30 and 90 days after the incident was reported to the NSW Police Force.

The clear-up status after 30 days could not be determined for any offences reported in the latest month. Hence, Table 5.1 is for the 24-month period ending one month before the quarterly reporting period. Similarly, the clear-up status after 90 days could not be determined for any offences reported in the latest three months. Hence, Table 5.2 and Figure 5.1 is for the 24-month period ending three months before the quarterly reporting period.

REGIONAL STATISTICS

Statistics are provided on the number of criminal incidents (victims for murder) recorded for each of the Statistical Areas (SAs) of NSW as defined by the Australian Bureau of Statistics (ABS).

Recorded criminal incidents which occurred in correctional, detention or remand centres, however, are not counted in the SA in which the incident occurred. Appendix 4 provides maps indicating the location of each SA. Appendix 5 lists the Local Government Areas (LGAs using 2017 boundaries) within each of the SAs. Note that LGA boundaries change from time to time. A criminal incident is counted within a particular region when the location of the offence falls within that region.

For the rate calculations, specialised population data were prepared and provided to BOCSAR by the Australian Bureau of Statistics.
