Evaluating the first tranche of the Table Offences Reform: Impacts on District Court finalisations, time to finalisation and sentencing outcomes

Clare Ringland

AIM

To examine the impact of reclassifying strictly indictable offences (which must be dealt with in the higher courts, i.e., District or Supreme Court) to offences that can be dealt with summarily in the New South Wales (NSW) Local Court (known as 'Table offences') on District Court finalisations, court delays and sentencing.

METHOD

The focus of the study was the first tranche of the Table Offences Reform, which was introduced in November 2016 and involved a small subset of break and enter offences. For related charges in the 2 years before and after the introduction of the reform, we compare the number of District Court finalisations, time from charge date to finalisation and the proportion of offenders who received prison penalties.

RESULTS

The number of finalisations for reform-related charges increased by 26 per cent post-reform (from 713 to 902). Fifteen per cent of post-reform versus 100 per cent of pre-reform matters were finalised in the District Court, resulting in 62 fewer trials and 509 fewer sentenced finalisations in the District Court (in other words, 85% of eligible offences were diverted from the District Court). Post-reform, there were an additional 204 defended hearings in the Local Court. The time from charge to finalisation decreased from a median of 404 days for pre-reform charges to 206 days for post-reform charges, a difference of 6 months. The difference in the time to finalisation post- versus pre-reform remained significant after adjusting for other factors, such as prior offending, number of offences and plea (HR = 2.88, 95% CI (2.59, 3.21), $p < .001$). Of those guilty of a post-reform charge, 59 per cent received a penalty of imprisonment, compared to 67 per cent of those guilty of a pre-reform charge. After adjusting for other factors, the likelihood of receiving a prison penalty longer than 12 months for charges in the post-reform period was estimated to be much lower than in the pre-reform period (OR = 0.16, 95% CI (0.11, 0.24), $p < .001$).

CONCLUSION

Results from this study suggest that reclassifying offences from strictly indictable to Table offences significantly reduced both the number of matters finalised in the District Court and court delay. The Table Offences Reform also decreased the likelihood of a custodial penalty being imposed.

court processes and delay

legislative evaluation

sentencing

INTRODUCTION

Between 2012 and 2016, the median time between arrest and finalisation for matters that proceeded to trial in the New South Wales (NSW) District Court increased from 512 to 714 days (a 39% increase). Over the same period, the median time between arrest and finalisation for matters that proceeded to sentence only in the NSW District Court increased from 403 to 444 days (a 10% increase; NSW Bureau of Crime Statistics and Research (BOCSAR), 2017). The increase in time taken to finalise matters in the NSW District Court occurred alongside increases in workload, with the number of matters committed for trial increasing by 35 per cent and the number of matters committed for sentence increasing by 38 per cent during this period (BOCSAR, 2017).

Against this backdrop, the NSW Government introduced a range of reforms to improve the efficiency of court processes and, in doing so, reduce District Court delay. For example, as part of the NSW 2016-2017 budget, the NSW Government (2016) announced a \$39 million package to fund the appointment of three new District Court judges, two new public defenders and extra sittings in regional areas. Further, in April 2018 the Early Appropriate Guilty Plea (EAGP) reforms were introduced, involving a range of initiatives such as simplified briefs, mandatory criminal case conferencing and statutory sentence discounts based on the timing of the guilty plea (NSW Government, 2020). The EAGP reforms apply to all strictly indictable criminal offences and Table offences elected to be dealt with in the higher courts. The latter are known as 'Table offences' as they are contained in Tables 1 and 2 of Schedule 1 of the *Criminal Procedure Act 1986* (NSW).

Another set of reforms, referred to in this report as the Table Offences Reform, involved moving a subset of strictly indictable offences to Tables 1 and 2. Strictly indictable offences are the most serious offences and must be dealt with in the higher courts (i.e., District or Supreme Court), while Table offences can be dealt with summarily in the Local Court, unless an election is made to proceed in the District Court.¹ In the District Court, the maximum penalty available for the offence is the legislative maximum, whereas the sentencing power of a magistrate in the Local Court is constrained to a maximum of 2 years' imprisonment for a single offence or 5 years for multiple offences. Where, for example, NSW police prosecutors are of the view that a Table offence matter is serious enough to warrant a sentence that exceeds the 2-year sentencing jurisdiction of the Local Court, the Office of the Director of Public Prosecutions may elect to deal with the matter in the District Court.

The first tranche of the Table Offences Reform, the focus of this report, commenced in November 2016, and involved a small group of 'break and enter' offences under sections 109 and 111-113 of the *Crimes Act 1900* (NSW). The second tranche was implemented in 2018 in two phases and involved a subset of theft and justice procedure offences (April 2018), followed by robbery and illicit drug offences (July 2018). The strictly indictable offences that were reclassified as part of the first tranche of the Table Offences Reform are listed in Table 1 that follows, along with the strictly indictable and Table 1 offences that replaced them. As shown, the offences involve stealing or intentionally or recklessly damaging or destroying property, where the only circumstance of aggravation is that the offender is in the company of another person or persons. A distinguishing feature of the new Table 1 offences versus the new strictly indictable offences is the property value. Previously, in relation to the reform-related offences, no distinction was made based on the value of the property. Now, for Table 1 break and enter offences, the maximum value of the property stolen, destroyed or damaged is \$60,000; offences involving more than \$60,000 are strictly indictable. This brings the new Table 1 offences into line with other break and enter offences (e.g., sections 109(1), 112(1)(a) and 112(1)(b)), which have been classified this way since 2010.

¹ For Table 1 offences, which are more serious, either the prosecutor or defendant can make this election. For Table 2 offences, an election may only be made by the prosecutor: see *Criminal Procedure Act* section 260.

Table 1. Descriptions of old and new offences, by section of the *Crimes Act 1900* (NSW)

Section	Old strictly indictable offences	New Table 1 offences	New strictly indictable offences
109(2)	Aggravated commit SIO in dwelling and break out - in company Aggravated enter dwelling with intent to commit a SIO - offender in company	Aggravated in dwelling in company steal <= \$60k and break out Aggravated in dwelling in company damage property <= \$60k and break out Aggravated enter dwelling in company intend steal <= \$60k and break out Aggravated enter dwelling in company intend damage <= \$60k and break out	Aggravated commit SIO in dwelling - in company > \$60K Aggravated commit SIO in dwelling - in company - not steal etc. Aggravated enter dwelling with intent - in company - steal etc., > \$60K Aggravated enter dwelling with intent - in company - not steal etc.
111(2)	Aggravated enter dwelling with intent - offender in company	Aggravated enter dwelling in company with intent to steal <= \$60k Aggravated enter dwelling in company with intent to damage property <= \$60k	Aggravated enter dwelling with intent - in company - steal etc., > \$60K Aggravated enter dwelling with intent - in company - not steal etc.
112(2)	Aggravated B&E and commit SIO in company Aggravated commit SIO, break out - in company	Aggravated B&E dwelling etc in company steal <= \$60k Aggravated B&E dwelling in company damage property <= \$60k Aggravated in dwelling etc in company steal and break out <= \$60k Aggravated in dwelling in company damage property and break out <= \$60k	Aggravated B&E commit SIO - in company - steal etc., > \$60K Aggravated B&E commit SIO - in company - not steal etc. Aggravated commit SIO break out - in company - steal etc., > \$60K Aggravated commit SIO break out - in company - not steal etc.
113(2)	Aggravated B&E with intent - in company	Aggravated B&E dwelling etc in company intend steal <= \$60k Aggravated B&E dwelling etc in company intend damage <= \$60k	Aggravated B&E with intent - in company - steal etc., > \$60K Aggravated B&E with intent - in company - not steal etc.

Note. B&E - break and enter; SIO - serious indictable offence.

As stated in the Attorney-General's second reading speech for the Criminal Procedure Amendment (Summary Proceedings for Indictable Offences) Bill 2016 (NSW), the main aim of allowing the specified offences to be dealt with in the Local Court was to reduce the time taken for matters to be finalised in court (Upton, 2016). By doing so, the stress and uncertainty for victims and witnesses would be reduced and justice administered faster. In 2016, the median time from arrest to finalisation for matters dealt with in the NSW Local Court was 83 days, compared to 492 days for matters dealt with in the NSW District Court (BOCSAR, 2017).² Further, it was expected that moving the offences to the Local Court would reduce the District Court criminal trial backlog by approximately 25 trials per year, thereby increasing capacity in the District Court.

In terms of penalties imposed by the Local Court for the reclassified break and enter offences, as stated in the second reading speech, no impact on sentencing outcomes was anticipated. The second reading speech referred to data reported by BOCSAR for the years 2012 to 2014 that showed over 90 per cent of sentences imposed in the District Court for the break and enter offences of interest were within the Local Court's sentencing scope.

The current study

While it is intuitive that reclassifying offences from strictly indictable to Table 1 offences would result in a reduction in the number of District Court finalisations and the time from charge to finalisation, the extent and magnitude of the expected reduction is unknown. Indeed, the impact of the reform will largely depend on the proportion of matters that (still) involve strictly indictable offences following the introduction of the reform, as well as the proportion of matters where an election is made to proceed in the District Court. Further, while it was anticipated that the reform would not impact sentencing outcomes, it is important to assess whether this assumption holds true.

The aims of the current study are to:

1. describe changes in the number of finalised appearances for the offences of interest before and after the introduction of the reform, particularly the number of trials and sentence finalisations in the District Court
2. examine the time from charge to finalisation pre- and post-reform
3. investigate whether offenders are more or less likely to receive prison penalties following the reform.

While offences directly impacted by the reform are the focus of the report, we also examine outcomes for break and enter offences more generally. Defendants with reform-related charges that were withdrawn may have been proceeded against with other break and enter charges in the Local Court. This is more likely to have happened pre-reform than post-reform, as all such offences were previously strictly indictable and police may have proceeded with less serious non-reform-related offences. These matters are not included when looking at outcomes for reform-related charges, but are potentially captured when looking at outcomes for break and enter offences overall.

² These figures are based on those 'on bail', 'bail dispensed with' or 'bail refused' at the time of finalisation; defendants 'in custody for a prior offence' and those with 'warrant executed – police' are excluded. Further, the figures combine matters that proceeded to defended hearing/trial with those sentenced after a guilty plea.

METHOD

Data sources

The main data source for this study is BOCSAR's Reoffending Database (ROD), which links all criminal court appearances finalised in NSW since 1994. ROD contains a range of person-, offence- and appearance-related details, as well as movements in and out of custody in NSW.

ROD does not include all charges that were withdrawn by the prosecution³ or charges yet to be finalised (e.g. matters committed to sentence or trial).⁴ In order to track charges through the criminal justice system and identify charges that were withdrawn or yet to be finalised, ROD data was supplemented with data from BOCSAR's Combined Courts data collection⁵ and the NSW Police Force's Computerised Operational Policing System (COPS).⁶

Variables

A range of variables were used to describe and compare the pre- and post-reform samples. These included defendants' socio-demographic characteristics (age, sex, Aboriginality, level of socioeconomic disadvantage⁷ and remoteness⁸ of area of residence⁹) and criminal histories (number of finalisations with prison penalties and proven offences in the previous 5 years). The following appearance and offence characteristics were also examined:

- Characteristics of the index appearance:
 - jurisdiction – Local Court or District Court
 - bail status at time of finalisation – classified as bail dispensed with, on bail, bail refused (including warrant executed), in custody for a prior offence
 - number of days in custody from charge to finalisation – categorised as 0, 1-90, 91-180, 181-365, 366 days or more
 - whether the matter was finalised after the introduction of key sentencing reforms in September 2018, which replaced a number of penalties with new community-based orders and placed increased emphasis on supervision.
- Characteristics of reform offences:
 - number of reform offences, proven and unproven – coded 0, 1, 2, 3 or more
 - whether any reform offences were strictly indictable
 - whether reform offences were within sections 109(2), 111(2), 112(2) or 113(2) of the Crimes Act
 - whether guilty pleas were entered for no, some or all reform offences.
- Other offences at the index appearance:
 - whether there were any non-reform break and enter offences
 - whether there were any non-reform offences within the same sections as reform offences
 - whether there were any non-reform offences that were strictly indictable
 - whether there were any offences that were:
 - acts intended to cause injury (Australian and New Zealand Standard Offence Classification, ANZSOC Division 02; ABS, 2011)
 - theft offences (ANZSOC Division 08)
 - traffic offences (ANZSOC Division 14)

³ ROD ordinarily does not include strictly indictable offences finalised in the Local Court by anything other than a penalty. That is, strictly indictable offences withdrawn in the Local Court (i.e. prior to reaching the higher courts) are not included in ROD.

⁴ ROD does not ordinarily contain charge dates for higher court matters.

⁵ This data collection includes disposal-, offence- and penalty-related details of criminal offences finalised in the NSW Children's, Local, District and Supreme Courts, as well as committal outcomes.

⁶ COPS is used for record-keeping for all police operations and includes details of criminal incidents detected by or reported to police and persons of interest proceeded against by police.

⁷ According to the Australian Bureau of Statistics (ABS; 2016a) Socio-Economic Indices for Areas (SEIFA) Index of Relative Disadvantage (IRSD), classified to quartiles of disadvantage.

⁸ According to the ABS (2016b), categorised as 'Major cities', 'Inner regional', and 'Outer regional/Remote/ Very remote'.

⁹ Where this was missing/unknown, the most recent non-missing value from an appearance within the previous 5 years was used.

- offences against justice procedures (ANZSOC Division 15)
- strictly indictable (including reform and break and enter offences).
- Other finalisations between the charge and finalisation dates:
 - any finalisations in the Local or District Courts
 - whether there were any finalisations with a prison penalty
 - whether there were any finalisations with proven:
 - acts intended to cause injury (ANZSOC Division 02)
 - theft offences (ANZSOC Division 08)
 - traffic offences (ANZSOC Division 14)
 - offences against justice procedures (ANZSOC Division 15).

Outcomes of interest

The main outcomes of interest are:

- the number and proportion of matters finalised in the District Court as trials and sentence matters
- the number of days from date of police charge to court finalisation
- the proportion of offenders who received a prison penalty for a proven reform offence and the proportion of these who received a prison penalty of more than 12 months.¹⁰

Sample

Charges relating to offences that were included in the first tranche of the Table Offences Reform are the focus of this study.

Analyses comparing the characteristics of appearances and main outcomes of interest are restricted to those dealt with in the NSW Local and District Courts¹¹ and are further limited to matters:

- with charge dates between 1 November 2014 and 31 October 2016 (pre-reform) and 11 November 2016 and 31 October 2018 (post-reform)
- involving either pre-reform charges relating to old strictly indictable offences or post-reform charges relating to new Table 1 and strictly indictable offences, but not both
- where all reform offences were not withdrawn by the prosecution.

The same criteria were applied when examining break and enter offences overall, but with reference to break and enter charges under ANZSOC group 0711,¹² rather than reform charges/offences.

The post-reform period was restricted to charges in the first 24 months. At the time of analysis, data was available up until 29 February 2020, allowing a minimum of 16 months for charges to be finalised in court. As such, it was expected that matters included in the sample would be generally representative of all charges in the period. However, some matters not finalised within 16 months will not be included; these are likely to be more serious matters finalised in the District Court.

¹⁰ In 2015 and 2016, the mean custodial sentences for break and enter offences were 8.3 and 7.7 months respectively in the Local Court and 19.9 and 20.1 months respectively in the District Court (BOCSAR, NSW Criminal Courts Statistics December 2019). Based on these estimates, and given the Local Court is constrained to sentences of a maximum of 2 years' imprisonment, 12 months (non-parole) was chosen as an indicator of longer prison sentences in the Local Court. Analyses examining head sentences (total terms) of more than 12 months were also undertaken and are included in the Appendix Table A10.

¹¹ Matters dealt with by police caution or youth justice conference, or finalised in the NSW Children's Court or Drug Court, are excluded.

¹² While the reform-related offences fall under ANZSOC 0711 (i.e., unlawful entry with intent/burglary, break and enter), a small proportion (10%) of offences within the same sections fall under ANZSOC 0211 (i.e., serious assault resulting in injury) and ANZSOC 0521 (i.e., deprivation of liberty/false imprisonment). These offences are also included when looking at break and enter offences more broadly.

Statistical analysis

The analyses described here were undertaken for reform-related offences and for break and enter offences overall.

Finalisations in the District Court

The number and proportion of matters finalised in the District Court, through trials and sentence finalisations, are presented and compared pre- and post-reform. Differences are tested using Pearson's chi-squared test of independence.

Time from charge to finalisation

The time from police charge to court finalisation was examined for finalised appearances relating to pre- and post-reform charges. This comparison involved estimating the median time from charge to finalisation and the proportion of defendants with matters finalised at 180 and 365 days. Differences in the time to finalisation are expressed as hazard ratios (HRs), where an HR significantly greater than 1 indicates that post-reform defendants were more likely to have their matter finalised than pre-reform defendants. A HR significantly less than 1 indicates that post-reform defendants were less likely to have their matter finalised than pre-reform defendants. HRs are presented both unadjusted and adjusted for a range of other characteristics associated with the time from charge to finalisation. Supplementary analyses were undertaken to separately examine those who were and were not in custody at the time of finalisation.

Probability of a prison penalty

The proportion of offenders who received a prison penalty for a reform offence and who received a prison penalty longer than 12 months (non-parole) are reported and compared pre- and post-reform, using logistic regression. These analyses are restricted to those who had at least one proven reform offence. We express the difference between periods as an odds ratio (OR), where an OR significantly greater than 1 indicates that post-reform offenders are more likely to receive a penalty of imprisonment than pre-reform offenders and less than 1 indicates that post-reform offenders are less likely to receive a penalty of imprisonment than pre-reform offenders. ORs are presented both unadjusted and adjusted for a range of other characteristics associated with the likelihood of receiving a prison penalty. Of particular interest are the impacts of bail status and time spent in custody between charge and finalisation on sentencing outcomes. We examine the influence of these factors by adding them to the statistical models and performing separate analyses for those who were and were not in custody at the time of finalisation.

RESULTS

Overview

We begin with an overview of reform-related charges from January 2014 to January 2020. Figure 1 shows the monthly number of charges for reform-related and other break and enter offences (including those falling under the same section as the reform-related offences) recorded in COPS. This figure includes charges for persons of interest proceeded against to court (regardless of the outcome), aged 18 years and over.

As shown in Figure 1, following the introduction of the reform in mid-November 2016, the new strictly indictable and Table 1 offences have been used in place of the old strictly indictable offences. The numbers of reform-related charges have remained relatively stable since the offence reclassification, approximately one fifth of total break and enter charges. Less than 10 per cent of new reform-related charges are strictly indictable offences; 90 per cent are charges for Table 1 offences.

Figure 1. Number of charges for reform-related offences, same section offences, and other break and enter offences by charge date, January 2014 – January 2020, COPS

Figure 1 also shows the number of charges for offences not directly impacted by the reform but within the same sections as the reform offences (i.e., sections 109(2), 111(2), 112(2) and 113(2), as described in Appendix Table A1), and other offences falling under the ANZSOC group 0711 (i.e., unlawful entry with intent/burglary, break and enter). The number of charges for other offences within the same sections of the Crimes Act as the reform offences increased after the introduction of the reform. All of these same section offences are strictly indictable. Charges for other break and enter offences, and for break and enter offences in total, have remained reasonably stable since January 2014.

Figure 2 combines COPS and Combined Courts data collections to show the status of charges - whether they were withdrawn by the prosecution, otherwise finalised, or were still pending.¹³ The figure is limited to charges dealt with in Local and District Courts, or those where the person of interest was 18 years or over (for offences that only appear in COPS data).

Figure 2 highlights the large proportion of charges withdrawn by the prosecution, particularly prior to the introduction of the reform (44% pre-reform vs. 25% post reform were withdrawn).¹⁴ The majority of charges since July 2019 are pending.

¹³ Pending offences include those where matters have been adjourned and/or committed for sentence or trial but not finalised. Offences such as those of unknown status and those appearing only in COPS as 'non conviction not proved' are included as 'other'.

¹⁴ By comparison, approximately 55 per cent of charges for other strictly indictable offences within the same sections in the pre-reform period were also withdrawn.

Figure 2. Status of reform-related charges by charge date, January 2014 – January 2020, COPS and Combined Courts data collections

Matters finalised in NSW Local and District Courts

Key characteristics of pre- and post-reform matters finalised in the Local and District Courts are presented in Table 2. Characteristics are shown for appearances with at least one reform-related charge or break and enter charge. Table A2 of the Appendix includes these and other sociodemographic and offending characteristics for all finalised court appearances relating to post-reform charges (with no restriction on charge dates) and separately for those matters relating to charges in the 2-year pre- and post-reform periods (in line with Table 2).

As shown in Table 2, after the reform:

- there was a 26 per cent increase in the number of reform-related finalisations (902 post- vs. 713 pre-reform)
- 85 per cent of matters were dealt with in the Local Court and 15 per cent in the District Court
- 6 per cent of matters involved strictly indictable reform offences
- 27 per cent of matters involved two or more reform offences, compared with 20 per cent pre-reform
- 37 per cent of matters involved theft offences and 29 per cent involved offences against justice procedures as concurrent offences, compared with 25 and 3 per cent respectively pre-reform
- 82 per cent entered a guilty plea for a reform offence, compared with 88 per cent pre-reform
- 35 per cent were bail refused at finalisation, compared with 25 per cent pre-reform; 24 per cent were in custody for a prior offence at finalisation, compared with 33 per cent pre-reform
- the median time spent in custody between charge and finalisation was 69 days, compared with 224 days pre-reform
- in 33 per cent of cases, the defendant had another matter finalised in the Local or District Court between the charge and finalisation of the reform-related matter, compared with 58 per cent pre-reform.

Table 2. Characteristics of matters finalised in Local and District Courts, pre- and post-reform

	Reform offences				Break and enter offences			
	Pre		Post		Pre		Post

With prison penalty	210	29.5	129	14.3	715	16.8	598	14.0
With proven acts intended to cause injury	84	11.8	53	5.9	316	7.4	265	6.2
With proven theft offences	169	23.7	105	11.6	540	12.7	445	10.4
With proven traffic offences	128	18.0	93	10.3	456	10.7	385	9.0
With offences against justice procedures	205	28.8	121	13.4	704	16.6	584	13.6

^a There are less matters with reform offences under 'Reform offences' than 'Break and enter offences' because matters where all reform offences were withdrawn are excluded from 'Reform offences'.

^b Matters may include offences from more than one section.

The characteristics of break and enter related matters overall did not change much pre- and post-reform. However, 23 per cent of cases post-reform (compared with 17% pre-reform) involved reform-related offences, and 78 per cent post-reform were finalised in the Local Court compared with 64 per cent pre-reform. There was a slight increase in the proportion of break and enter matters that involved non-reform offences within the same sections (14% vs. 16%). The characteristics of reform-related matters post-reform were generally similar to the characteristics of break and enter related matters overall.

As can be seen in Table A2 of the Appendix, pre- and post-reform defendants tended to be similar when compared on a range of sociodemographic and prior offending characteristics. However, post-reform, a greater proportion of defendants with reform-related charges resided in major cities than pre-reform (69% vs. 57%). This pattern was not seen for break and enter offences overall (64% vs. 62%).

The next sections examine the three outcomes of interest: (1) the number of finalisations in the District Court, (2) the time from charge to finalisation and (3) the proportion of defendants receiving prison sentences.

Finalisations in the District Court

Presented in Table 3 are the numbers and proportions of pre- and post-reform matters by type of court finalisation. These are shown separately for matters including offences directly impacted by the reform and matters involving break and enter offences more generally. Prior to the reform, 100 per cent of reform-related matters (n = 713) were finalised in the District Court,¹⁵ with almost 10 per cent of reform-related matters finalised with a trial (n = 69) and 90 per cent sentenced after a guilty plea (n = 641). Post-reform, around 15 per cent of matters were dealt with in the District Court, less than 1 per cent of matters were finalised with a trial (n = 7), and 15 per cent were sentenced after a guilty plea (n = 132).¹⁶ Comparing matters relating to charges in the 2 years post-reform with those in the 2 years prior to the reform, there was a reduction of 62 trials and 509 sentenced finalisations in the District Court.

Table 3. Disposal outcome for finalised matters in Local and District Courts, pre- and post-reform

	Reform offences				Break and enter offences				
	Pre		Post		Pre		Post		
	1 November 2014 - 31 October 2016 (N=713)	n	per cent	11 November 2016 - 31 October 2018 (N=902)	n	per cent	1 November 2014 - 31 October 2016 (N=4,251)	n	per cent
Jurisdiction & Disposal outcome									
<i>District Court</i>	713	100.0	139	15.4	1,545	36.3	965	22.5	
Trial	69	9.7	7	0.8	169	4.0	88	2.1	
Sentence only (sentenced after a guilty plea)	641	89.9	132	14.6	1,368	32.2	868	20.3	
Other	3	0.4			8	0.2	9	0.2	
<i>Local Court</i>			763	84.6	2,706	63.7	3,319	77.5	
Defended hearing			204	22.6	799	18.8	912	21.3	
Sentenced after a guilty plea			551	61.1	1,789	42.1	2,306	53.8	
Other			8	0.9	118	2.8	101	2.4	

¹⁵ Noting that matters with all reform-related charges withdrawn are not included.

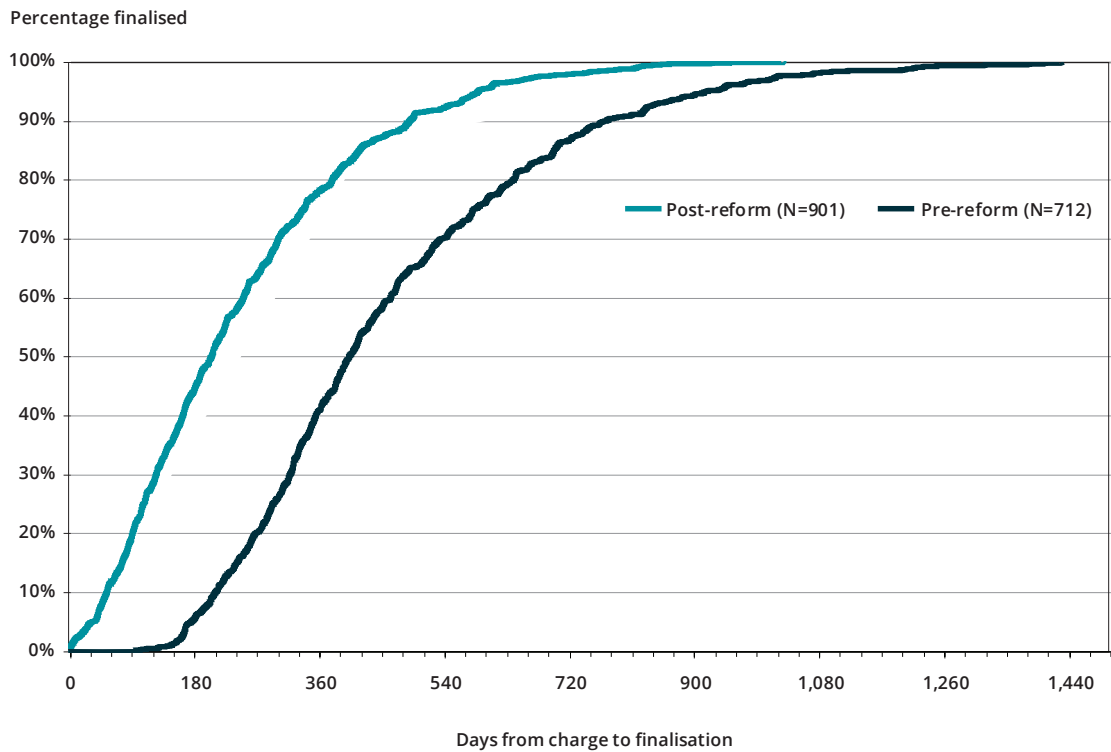

¹⁶ Comparing how matters were finalised within the District Court pre- and post-reform, there was no significant difference in the proportion finalised with a defended trial versus sentenced after a guilty plea. However, comparing matters across jurisdictions, there was a significant difference ($p < .001$) in the proportions of matters dealt with in the Local Court and matters overall that were finalised with a defended trial.

The reduction in trials and sentencing finalisations in the District Court for reform-related offences contributed to a reduction in the number of trials and sentencing finalisations associated with break and enter offences overall. The proportion of break and enter matters finalised with a trial dropped from 4 to 2 per cent, corresponding to a reduction of 81 trials over a 2-year period; matters finalised in the District Court by sentence after a guilty plea dropped from 32 to 20 per cent, a reduction of 500 finalisations over the same period.¹⁷ However, the reduction in trials and sentencing finalisations in the District Court was accompanied by an increase in defended hearings in the Local Court; there were 113 more defended hearings for break and enter offences overall (an increase from 19% of matters pre-reform to 21% of matters post-reform).¹⁸

Time from charge to finalisation

Estimates of the number of days from charge to finalisation, for matters relating to pre- and post-reform charges, are presented in Figure 3 and Table 4.¹⁹

Figure 3. Time from charge to finalisation, relating to charges in pre- and post-reform periods, for matters finalised in NSW Local and District Courts by 29 February 2020

As shown in Figure 3, and also presented in Table 4, the median time from charge to finalisation for matters involving post-reform charges was 206 days. This compares with a median of 404 days for matters involving pre-reform charges, a difference of approximately 6 months. Also shown in Table 4, 78 per cent of matters relating to post-reform offences were finalised within 365 days, compared with only 42 per cent of matters relating to pre-reform offences.

17 Comparing how matters were finalised in the District Court pre- and post-reform, there was no significant difference in the proportion finalised with a trial versus sentenced after a guilty plea. However, comparing matters across jurisdictions, there was a significant difference in the proportion of matters dealt with in the Local Court ($p < .001$).

18 Comparing how matters were finalised within the Local Court pre- and post-reform, post-reform a greater proportion of matters involved sentencing after a guilty plea ($p = .003$). Comparing across jurisdictions there was a significant increase in the proportion of matters overall that involved sentencing by the lower courts after a guilty plea ($p < .001$).

19 Figure 3 and Table 4 do not include a small number of matters that involved defendants less than 18 years, or matters where the recorded charge and finalisation dates were the same.

Table 4. Time from charge to finalisation for finalisations in Local and District Courts, pre- and post-reform

	Reform offences		Break and enter offences	
	Pre 1 November 2014 - 31 October 2016 (N=712)	Post 11 November 2016 - 31 October 2018 (N=901)	Pre 1 November 2014 - 31 October 2016 (N = 4,235)	Post 11 November 2016 - 31 October 2018 (N = 4,269)

p-value		< .001	< .001	< .001

* Adjusted for sex, age group, remoteness of area of residence, number of court appearances with proven offences in prior 5 years, prison penalty in prior 5 years, number of reform offences, other offences, plea to reform/break and enter offences, and bail status at finalisation.

The difference in time from charge to finalisation is expressed as an unadjusted HR of 2.55 (95% confidence interval (CI) (2.30, 2.83), $p < .001$) and adjusted HR of 2.88 (95% CI (2.59, 3.21), $p < .001$), after adjusting for a range of other characteristics associated with the time from charge to finalisation, including bail status at finalisation (presented in Appendix Table A3). The HRs indicate that at any time (days from charge) defendants with post-reform charges were more than twice as likely to have their matters finalised than those with pre-reform charges.²⁰ The HRs of 5.22 (95% CI (4.62, 5.89), $p < .001$) for post-reform matters in the Local Court and 0.99 (95% CI (0.82, 1.19), $p = .924$) in the District Court suggest that the movement of matters from the District Court to the Local Court caused the decrease in the time from charge to finalisation;²¹ the time taken to finalise matters in the District Court did not change.²²

20 Analyses stratified by bail status were also undertaken. These analyses showed similar post- versus pre-reform effects for those on bail or bail dispensed with (HR = 2.98, 95% CI (2.53, 3.52), $p < .001$), bail refused (HR = 3.95, 95% CI (3.18, 4.90), $p < .001$) or in custody for a prior offence (HR = 2.32, 95% CI (1.89, 2.85), $p < .001$). Summary statistics of time to finalisation by bail status, pre- and post-reform, are included in Appendix Table A4.

21 Analyses stratified by bail status showed similar effects when comparing post-reform Local Court matters with pre-reform District Court matters for those on bail or who had bail dispensed with (HR = 5.51, 95% CI (4.55, 6.67), $p < .001$), bail refused (HR = 6.03, 95% CI (4.75, 7.66), $p < .001$) or in custody for a prior offence (HR = 5.44, 95% CI (4.26, 6.94), $p < .001$).

22 Indeed, it may be that there has been an increase in the time taken to finalise reform-related offences in the District Court. Charges that take longer to finalise may have still been pending by 29 February 2020. This is more likely to impact matters relating to post-reform charges, given the shorter follow-up period.

The time taken to finalise reform-related matters is now in line with the time taken to finalise break and enter offences more generally. This can be seen by comparing the post-reform columns for the reform and break and enter offences in Table 4. Focusing on matters relating to break and enter charges generally, the reduction in the time to finalise reform-related charges has contributed to a reduction in the time to finalise break and enter offences overall. The median time from charge to finalisation decreased from 236 to 203 days for matters involving pre- and post-reform break and enter charges, respectively. The difference in the time to finalisation post- versus pre-reform is expressed as an adjusted HR of 1.27 (95% CI (1.21, 1.32), $p < .001$). Relative to pre-reform in the District Court, similar estimates were seen for pre- and post-reform matters in the Local Court (HRs 4.13 and 4.59 respectively). Full models are included in Appendix Table A5.

Probability of a prison penalty

For both pre- and post-reform charges, 92 per cent of reform-related matters resulted in a proven offence. Table 5 describes the proportion and likelihood of receiving a prison penalty of any length, pre- and post-reform.

Of reform matters with proven offences, 59 per cent post-reform versus 67 per cent pre-reform resulted in a prison sentence. The adjusted odds ratio of 0.50 in Table 5 (shown in the 'Post' column under 'Reform offences') suggests a large effect of the reform on the proportion of offenders who received a prison penalty, even after adjusting for a range of other factors (including the sentencing reform); offenders were much less likely to receive a prison penalty for post-reform charges. However, after controlling for whether the offender was in custody at the time of finalisation, and the number of days spent in custody between charge and finalisation, the effect of the reform on imprisonment is reduced and is no longer significant (OR = 0.67, $p = .095$).²³ Despite this, a significant reduction in imprisonment is shown for post-reform Local Court matters, compared with pre-reform (District Court) matters (OR = 0.54, $p = .013$);²⁴ by contrast, no significant difference was found between pre- and post-reform District Court matters.²⁵ Full models are included in Table A7 of the Appendix.

Looking at break and enter offences in total, there was a small reduction in the proportion of offenders who received imprisonment following the introduction of the reforms (61.3% pre vs. 59.0% post). This effect remains after adjusting for a range of other factors, including the sentencing reform, whether the offender was in custody at the time of finalisation, and the number of days spent in custody between charge and finalisation. Penalties of imprisonment were significantly less likely for both pre- and post-reform Local Court matters, compared with pre-reform District Court matters. While there was no significant difference in the likelihood of receiving a prison penalty in the District Court after the reform for all break and enter offences, there was a small reduction in prison penalties in the Local Court post- versus pre-reform (OR = 0.78, 95% CI (0.64, 0.95), $p = .014$). Full models are included in Table A8 of the Appendix.

23 Analyses stratified by bail status were also undertaken. No statistical differences were found in the likelihood of imprisonment post- versus pre-reform for those who were bail refused or in prison for a prior offence. For those on bail (including bail dispensed with), the odds of a prison penalty were less post-reform compared with pre-reform (OR = 0.42, 95% CI (0.22, 0.80), $p = .009$). Summary statistics of prison penalties by bail status are included in Appendix Table A6.

24 Analyses stratified by bail status found no statistical differences for those who were bail refused or in prison for a prior offence. For those on bail or bail dispensed, the likelihood of imprisonment was much lower post-reform in the Local Court than pre-reform in the District Court (OR = 0.32, 95% CI (0.16, 0.64), $p = .001$).

25 The same analyses were undertaken excluding matters finalised after the sentencing reforms. The findings were very similar, with the exception of the adjusted model accounting for bail status and days spent in custody, where a significant difference in a prison penalty was found post- versus pre-reform (OR = 0.49, 95% CI (0.29, 0.88), $p = .009$).

* Adjusted for sex, age group, remoteness of area of residence, number of court appearances with proven offences in prior 5 years, prison penalty in prior 5 years, number of reform offences, other offences, plea to reform/break and enter offences, and bail status at finalisation.

Prison penalty of more than 12 months

For post-reform matters, the median non-parole prison term for a reform offence was 9 months, compared with 17 months pre-reform (average non-parole periods were 10.6 and 18.7 months, respectively).²⁶ Presented in Table 6 are the proportions of offenders who received prison penalties with minimum (non-parole) terms of more than 12 months. This shows that 16 per cent of those charged with a reform-related offence after the commencement of the reform received a prison penalty of more than 12 months, compared with 46 per cent of those charged before the reform. The unadjusted odds ratio of 0.22 confirms that post-reform offenders were much less likely to receive a prison penalty with a minimum term of more than 12 months than pre-reform offenders. Odds ratios were further reduced after adjusting for other factors, including the sentencing reform, whether in custody at finalisation, and the number of days spent in custody between charge and finalisation (OR = 0.16, 95% CI (0.11, 0.24), $p < .001$).^{27,28} There was no significant difference in the likelihood of a prison penalty of more than 12 months in the District Court post-reform (relative to pre-reform). However, the likelihood of receiving a prison sentence of more than 12 months for a post-reform charge in the Local Court was significantly less than

26 The median total term (head sentence) for a reform offence post-reform was 16 months, compared with 30 months pre-reform (average total terms were 18.5 and 33.0 months, respectively).

27 The same analyses were undertaken excluding matters finalised after the sentencing reforms. The findings were very similar.

28 Analyses stratified by bail status showed similar post- versus pre-reform estimates for those on bail (including bail dispensed with) and those who were bail refused or in custody for a prior offence (OR = 0.12, 95% CI (0.03, 0.41), $p = .001$ and OR = 0.16, 95% CI (0.10, 0.26), $p < .001$, respectively).

for a pre-reform charge in the District Court (OR = 0.08, 95% CI (0.05, 0.14), $p < .001$).²⁹ Full models are included in Table A9 of the Appendix and results examining the proportions of offenders who received prison penalties with total terms of more than 12 months for reform offences are presented in Table A10.³⁰

Looking at break and enter offences in total, following the introduction of the reform, there was a reduction in prison penalties of more than 12 months (17.0% post- vs. 22.6% pre-reform). This effect remained after adjusting for a range of other factors. Prison penalties of more than 12 months were significantly less likely for Local Court break and enter matters than District Court break and enter matters, both pre- and post-reform.³¹ Within each court, there were no significant differences in the likelihood of receiving a prison penalty of more than 12 months for post- versus pre-reform break and enter charges.³² Full models are included in Table A11 of the Appendix.

* Adjusted for sex, age group, remoteness of area of residence, number of court appearances with proven offences in prior 5 years, prison penalty in prior 5 years, number of reform offences, other offences, plea to reform/break and enter offences, and whether finalised after the sentencing reforms.

29 Analyses stratified by bail status showed similar post-reform Local Court versus pre-reform District Court estimates for those on bail (including bail dispensed with) and those bail refused or in custody for a prior offence (OR = 0.04, 95% CI (0.01, 0.23), $p < .001$ and OR = 0.09, 95% CI (0.05, 0.15), $p < .001$, respectively).

30 Analyses examining total terms more than 12 months showed a similar pattern of results.

31 The post-reform Local Court versus District Court comparison is not directly shown in Table 6: OR = 0.05, 95% CI (0.04, 0.06), $p < .001$.

32 The Local Court post- versus pre-reform comparison is not directly shown in Table 6: OR = 1.02, 95% CI (0.79, 1.32), $p = .878$.

DISCUSSION

The purpose of this study was to examine the impact of the first tranche of the Table Offences Reform, which reclassified a small subset of break and enter offences from strictly indictable offences to Table 1 offences, thereby allowing them to be dealt with in the Local Court. Following the introduction of the reform, over 90 per cent of charges falling within the scope of the reforms were reclassified as Table 1 offences and around 85 per cent were finalised in the Local Court. Matters relating to charges in the 2 years following the introduction of the reform were finalised much faster than matters in the equivalent pre-reform period, when these offences could only be dealt with by the District Court. In terms of penalties received, those proven guilty of a reform-related offence post-reform were much less likely to receive a penalty of imprisonment than those found guilty of a relevant offence pre-reform.

The primary motivation for moving the strictly indictable break and enter offences to Table 1 of Schedule 1 of the Criminal Procedure Act was to reduce the delay in finalising these criminal matters. In this respect, the reform has achieved its objective. Our analysis shows that the median time from charge to finalisation was 6 months less for matters relating to post-reform charges, compared with pre-reform charges. Within 12 months of being charged, three-quarters of matters relating to post-reform charges were finalised, compared with two in five relevant charges pre-reform.

Moving offences to the Local Court clearly has benefits for the District Court caseload. Based on charges within the first 24 months after implementation of the reform, we estimate that there were approximately 30 fewer trials and 250 fewer sentencing finalisations per year in the District Court, significantly increasing the capacity of the District Court to deal with other matters. However, there was a concomitant increase in the Local Court caseload and, potentially, the complexity and seriousness of matters that now fall within the Local Court's jurisdiction (Office of the Chief Magistrate, 2019). Indeed, our study shows that almost one-quarter of all matters relating to post-reform charges were finalised by way of a defended hearing in the Local Court (204 matters relating to charges over a 2-year period). As the second tranche of the Table Offences Reform involves higher-volume offence categories than the first tranche, it will be particularly important to further evaluate the impact on the Local Court, including the capacity of magistrates to deal with more complex matters and the implications for victims.

A consequence of reclassifying the strictly indictable break and enter offences to Table 1 offences is that less severe penalties were imposed. Those guilty of reform-related offences were found to be less likely to receive penalties of imprisonment post-reform (59% vs. 67%, respectively) and even less likely to receive penalties of imprisonment of more than 12 months (16% vs. 46%, respectively) than before the reform was introduced. Given those charged with strictly indictable offences are more likely to be remanded for considerably longer periods of time while waiting for matters to be finalised in the higher courts, this finding is perhaps not surprising. It could be expected that, the more time spent on remand, the more likely an offender will receive a longer prison penalty. However, even after adjusting for bail status and time spent in custody between charge and finalisation, there were large and significant differences between pre-reform sentencing outcomes in the District Court and post-reform sentencing outcomes in the Local Court. These differences seem to reflect differences in sentencing outcomes in the Local and District Courts more generally. For example, in 2016, the average custodial sentences for break and enter offences finalised in the District and Local Courts were 20 months and 8 months, respectively (BOCSAR, 2017). In this study, similar average custodial sentences were seen for reform offences pre- and post-reform.

There are several important limitations of the current study that should be noted. Firstly, while attempts have been made to compare similar defendants and offences pre- and post-reform, the process of finalising a strictly indictable offence in the District Court is inherently different to finalising a Table 1 offence in the Local Court. For example, through the process of plea negotiations, charges for back-up or less serious offences may have been dealt with as alternatives to strictly indictable offences. The high proportion of pre-reform charges withdrawn by the prosecution (44% vs. 25% of post-reform charges) may reflect this. When looking at the outcomes of reform-related matters finalised in the Local and

District Courts before and after the reforms, we excluded matters where all reform-related charges were withdrawn and did not consider matters where alternative non-reform-related offences were finalised. The differing rate of charges withdrawn pre- and post- reform contributed to the increase in the number of finalised matters included in our comparisons (i.e., 902 vs. 713 matters for post- and pre-reform charges, respectively). In terms of the findings, this would likely result in the overestimation of the differences in time to finalisation and the proportion of offenders who received a prison penalty before and after the reform, as it is likely that alternative charges may have been dealt with in the Local Court. Outcomes for break and enter offences overall, however, suggest that the reform contributed to a significant reduction in District Court matters, time to finalisation and rates of imprisonment.

Secondly, several reforms were introduced during the current study period that may have impacted court processes and sentencing outcomes for the offences of interest in our study. In 2016 and 2017, the District Court Backlog Program increased the number of sitting weeks, judges, public defenders, special call-overs and readiness hearings in some District Courts. Some of these reforms were found to be associated with a significant increase in the number of matters finalised (Thorburn & Weatherburn, 2018). In addition, the early appropriate guilty plea (EAGP) reform commenced in April 2018 and applies to all strictly indictable and elected Table offences where proceedings commenced after 30 April 2018. A key objective of this reform is to sentence offenders earlier, with sentencing discounts dependent on the timing of the plea. The EAGP reform may have contributed to the reductions in time to finalisation and length of prison penalties found in the current study. However only 8 per cent of reform-related matters post-reform (and less than 10% of post-reform break and enter matters) were EAGP matters, so the impact of the EAGP reform on the current findings is likely to be minimal. Further, sentencing reforms were introduced in September 2018, with an increased focus on supervision for community-based offenders. More than one-third of post-reform matters in the current study were finalised after the introduction of the sentencing reform (compared with 4% of pre-reform matters). While some attempt was made to control for the impact of the sentencing reforms, the current study is unable to fully account for or partition out the effects of these concurrent reforms, which may account for some of the decrease in the likelihood in offenders receiving a term of imprisonment.

In conclusion, the first tranche of the Table Offences Reform appears to have achieved its objectives of enabling offences to be dealt with faster and reducing the caseload of the District Court. It also appears to have impacted sentencing outcomes for the related offences, which was not an explicit objective but aligns with the objectives (and coincided temporally with the commencement) of the 2018 sentencing reforms. It is unknown whether the Reform has benefited victims, witnesses and defendants by reducing stress and uncertainty and provided offenders with quicker access to support and supervision; these outcomes were beyond the scope of the current evaluation. The impacts of the second tranche of the Reform on Local and District Court caseloads, time to justice and sentencing outcomes should also be evaluated, once sufficient time has elapsed for cases to proceed through the criminal justice system.

ACKNOWLEDGEMENTS

The author would like to thank the anonymous reviewer for their constructive feedback. The author would also like to thank colleagues at BOCSAR, particularly Suzanne Poynton, Jackie Fitzgerald and Malindi Sayle for their comments on drafts of the report, Stewart Boiteux for proofreading and Florence Sin for desktop publishing the bulletin.

Table A10. Prison penalty of more than 12 months (total term), pre- and post-reform

	Reform offences		Break and enter offences	
	Pre 1 November 2014 - 31 October 2016 (N=653)	Post 11 November 2016 - 31 October 2018 (N=834)	Pre 1 November 2014 - 31 October 2016 (N=3,802)	Post 11 November 2016 - 31 October 2018 (N=3,855)
Prison sentence, total term > 12 months				
n	514	320	1,592	1,386
per cent (95% confidence interval)	63.4 (59.6, 67.1)	38.4 (35.1, 41.8)	41.9 (40.3, 43.5)	36.0 (34.4, 37.5)
Odds ratio, unadjusted				
Relative to pre-reform (95% confidence interval)	1.00	0.36 (0.29, 0.44)	1.00	0.78 (0.71, 0.85)
p-value		< .001		< .001
Odds ratio, adjusted*				
Relative to pre-reform (95% confidence interval)	1.00	0.19 (0.14, 0.26)	1.00	0.57 (0.50, 0.64)
p-value		< .001		< .001
Odds ratio, adjusted* including bail status & days spent in custody				
Relative to pre-reform (95% confidence interval)	1.00	0.23 (0.15, 0.34)	1.00	0.64 (0.55, 0.73)
p-value		< .001		< .001
Odds ratio, adjusted* including bail status, days spent in custody & jurisdiction				
Relative to pre-reform District Court (95% confidence interval)	<i>District Court</i> 1.00	<i>District Court</i> 1.07 (0.54, 2.12)	<i>District Court</i> 1.00	<i>District Court</i> 0.97 (0.72, 1.32)
p-value		.852		.844
Relative to pre-reform District Court (95% confidence interval)	<i>Local Court</i> Not applicable	<i>Local Court</i> 0.16 (0.10, 0.24)	<i>Local Court</i> 0.12 (0.10, 0.16)	<i>Local Court</i> 0.10 (0.08, 0.13)
p-value		< .001	< .001	< .001

* Adjusted for sex, age group, remoteness of area of residence, number of court appearances with proven offences in prior 5 years, prison penalty in prior 5 years, number of reform offences, other offences, plea to reform/break and enter offences, and whether finalised after the sentencing reforms.

Table A11. Models predicting prison penalties longer than 12 months, break and enter offences

	Adjusted			Adjusted, including bail status and days in custody			Adjusted, including bail status and days in custody and jurisdiction		
	Odds ratio	95% confidence interval	p-value	Odds ratio	95% confidence interval	p-value	Odds ratio	95% confidence interval	p-value
Post- vs. pre-reform	0.44	(0.38, 0.51)	< .001	0.59	(0.49, 0.69)	< .001			
Pre/post by jurisdiction (vs. pre-reform District Court)									
Pre-reform Local Court							0.05	(0.04, 0.07)	< .001
Post-reform Local Court							0.05	(0.04, 0.07)	< .001
Post-reform District Court							1.10	(0.84, 1.45)	.470
Male vs. female	2.29	(1.76, 2.97)	< .001	1.70	(1.27, 2.29)	< .001	2.01	(1.46, 2.77)	< .001
Age group (vs. 18-20 years)									
21-24	1.88	(1.42, 2.47)	< .001	1.56	(1.14, 2.13)	.005	1.70	(1.20, 2.41)	.003
25-29	2.65	(2.02, 3.47)	< .001	1.98	(1.46, 2.68)	< .001	2.48	(1.76, 3.49)	< .001
30-34	2.33	(1.77, 3.07)	< .001	1.81	(1.33, 2.46)	< .001	2.36	(1.67, 3.34)	< .001
35-39	2.40	(1.81, 3.19)	< .001	1.95	(1.42, 2.68)	< .001	2.62	(1.83, 3.76)	< .001
40+	2.32	(1.77, 3.04)	< .001	2.06	(1.52, 2.80)	< .001	2.70	(1.91, 3.82)	< .001
Remoteness of area of residence (vs. major cities)									
Inner regional	0.84	(0.72, 0.98)	.030	0.95	(0.80, 1.13)	.553	0.96	(0.79, 1.17)	.723
Outer regional/remote/very remote	0.75	(0.60, 0.95)	.014	0.74	(0.57, 0.95)	.018	0.66	(0.49, 0.88)	.005
Unknown	1.52	(1.12, 2.07)	.008	1.07	(0.75, 1.53)	.713	1.45	(0.97, 2.16)	.068
Number of finalised court appearances in prior 5 years, 0-8+	0.93	(0.90, 0.96)	< .001	0.89	(0.86, 0.92)	< .001	0.93	(0.89, 0.97)	.002
Number of prison penalties in prior 5 years (vs. 0)									
1	4.04	(3.38, 4.83)	< .001	1.59	(1.29, 1.95)	< .001	1.98	(1.57, 2.50)	< .001
2	4.90	(3.99, 6.02)	< .001	1.75	(1.39, 2.21)	< .001	2.28	(1.75, 2.99)	< .001
3+	6.44	(5.19, 7.99)	< .001	2.36	(1.85, 3.00)	< .001	2.96	(2.25, 3.89)	< .001
Offences									
Any reform offences (yes vs. no)	3.77	(2.75, 5.16)	< .001	3.09	(2.16, 4.42)	< .001	2.66	(1.76, 4.04)	< .001
Number of other break and enter offences (vs. 0)									
1	1.63	(1.16, 2.28)	.005	1.72	(1.16, 2.54)	.006	2.15	(1.38, 3.34)	.001
2+	2.76	(1.94, 3.93)	< .001	2.26	(1.51, 3.39)	< .001	3.38	(2.13, 5.38)	< .001
Any other offences (yes vs. no)	0.61	(0.54, 0.69)	< .001	0.56	(0.48, 0.65)	< .001	0.97	(0.82, 1.15)	.722
Plea to break and enter offences (vs. No guilty pleas)									
Some guilty	1.72	(1.31, 2.24)	< .001	1.06	(0.78, 1.43)	.714	0.61	(0.44, 0.85)	.004
All guilty	1.57	(1.26, 1.96)	< .001	1.33	(1.03, 1.70)	.027	0.63	(0.48, 0.83)	.001
Sentencing reforms (post- vs. pre-)	2.51	(2.11, 2.99)	< .001	1.45	(1.18, 1.77)	< .001	0.84	(0.66, 1.07)	.152
In custody at finalisation (yes vs. no)				2.29	(1.80, 2.92)	< .001	4.88	(3.76, 6.34)	< .001
Days in custody between charge and finalisation (vs. 0)									
1-90				2.30	(1.52, 3.47)	< .001	2.29	(1.50, 3.48)	< .001
91-180				3.74	(2.44, 5.72)	< .001	2.46	(1.59, 3.81)	< .001
180+				24.23	(16.20, 36.25)	< .001	4.77	(3.12, 7.29)	< .001
